

stale real reference
($m=2000$, from $g=0$)

anchor: bidirectional per-axis
local moment match (Thm 3)

matches pool + output
normal variance
to the reference

fresh real
data (λ)

pool_g

train score
 $\hat{\varepsilon}_g$ (DSM)

sample
(reverse SDE)

gen_g

self-consuming recursion: gen_g becomes $(1 - \lambda)$ of pool_{g+1}
